

Since, banks are the major players in Bangladesh Capital Market; we have taken an initiative to dig down deep to better understand the situation of each and every single bank when it comes to their investment in stock market. Rules followed while analyzing was simple and up to date. Most banks provide Annexure showing their current situation on their Annual Reports except a few. By closely examining those we can get a bigger picture and therefore minimize risk when choosing a stock. Apart from being aware of their future profitability we can also get an insight of which stocks outperformed and which underperformed by highlighting the top losers and gainers in conditions of both amount and percentage. We have shown here the top three losers and gainers of each bank and its subsidiaries in terms of the actual amount and percentage. The imperative part of these graphs is the percentage of current market value as of cost holding which is on the last row of each table. The higher the percentage the better.
